(2) CIA Project No. C 858-63

Declass Review by NGA.

1. This memorandum is in response to the above referenced requirement calling for photo enlargements of five thermal power plants in the USSR.

2. The search for these power plants included study of the following missions to determine best quality and most current coverage:

[redacted] proved to be best quality and were selected for enlargement purposes. The plants at Kaliningrad, Berezna, Minsk and Vasilevichi are shown without doubt. However, a thorough search of the area at the coordinates 54° 16'N - 28° 21'E, and at the town of Vasilevichi failed to provide a positive identification of a thermal power plant. A large construction site close to the coordinates gives some indication of being a power plant site. For instance, cuttings leading to the swimming to possible point for intake and discharge of cooling water. The enlargements are all 20X magnification.

3. The photo analyst assigned to this project was [redacted]. Should any questions arise concerning this requirement they may be contacted directly on extension [redacted].
